DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 7, 9, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyaguchi (US 5,953,585).

Miyaguchi discloses a method for manufacturing an electroluminescent element (see Figs. 1A-1J and accompanying text). The method comprises: forming a light emitting part 2, 3, 4 and a protective layer 5 (Fig. 1A); forming a photoresist layer 6 (Fig. 1B), and patterning the photoresist layer (Fig. 1C); removing portions of the layers 3, 4 and 5 not covered with the patterned photoresist (Fig. 1D); forming a protecting layer 6 (Fig. 1E); and exposing and developing the protective layer.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Miyaguchi.

Miyaguchi does not teach that the dry etching process used to pattern the light emitting layers uses atmospheric pressure plasma. However, dry etching using atmospheric pressure plasma is well known in the art. Thus, a dry etching process using atmospheric pressure plasma is taken to obvious over the manufacturing method of Miyaguchi.

Allowable Subject Matter

3. Claims 3, 4, 6, 8, 10, 12 and 14 are allowable over the prior art of record. Claims 2 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed 18 February 2009 have been fully considered but they are not persuasive..

Applicant argues that Miyaguchi does not anticipate, teach or suggest that the protection layer is formed to cover the end part of the red color emitting material 3. Note, however, that in Figure 1J the protective layer 5 is formed on an "end portion." Furthermore, the phrase "end portion" does not necessarily mean a sidewall portion. Therefore, claim 1 does not distinguish over the method of Miyaguchi.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
